

# Fluorouracil (5FU) + Calcipotriene (Dovonex)

## Combination cream instructions:

1. Clean the area with soap and water before applying the medicine. The treatment is more effective if you scrub away any crust or flakes with a washcloth.
2. After washing the area, apply a thin layer of medicine to the treatment site with your fingertips, then wash your hands after application.
  - Repeat steps one and two, **TWICE DAILY** (morning and night) for \_\_\_\_\_.
  - You may apply a moisturizer or Vaseline if your skin feels irritated or dry. After completion of your treatment, you may continue this until your skin feels smooth.
  - Clinical trials have shown that this treatment will decrease your risk of future skin cancer and subsequent surgery.
  - The treated area must get red and crusty in order to burn out the precancerous cells, **YOU WILL BE A BIT UNCOMFORTABLE DURING TREATMENT**, but you will be happier in the long run!

\*\* This is a “NO PAIN, NO GAIN” treatment but IT IS WORTH IT! \*\*
